Lamination Plant

Lamination plant is used to apply a layer of a specific material on the product to improve their durability and quality. We are the chief manufacturer of lamination plant for doing the process accurately. The lamination

plant we offer are available in various dimension as per the substance that needs to be laminated. They are provided in best range of price according to the model selected by the client.

Experienced In Extrusion

Lamination Machine

The lamination machine is offered as per the industrial standards to make them suitable to the industries in global market. These machines are provided in different variety like extrusion coating, BOPP rice bag lamination, extrusion tarpaulin lamination, twin die extrusion coating and double die lamination machine. Each model is prepared with utter care and precision to give layer of specific thickness.

Experienced In Extrusion

Extrusion Coating Lamination Machine

The extrusion coating lamination machine is used in number of industries to execute the processes of extrusion smoothly and swiftly. They are made from top grade materials and latest technology. The extrusion coating machine is provided in various dimension and develop a later of varying thickness on the material. They are made in standard features and even modified as per the need of customer.

Experienced In Extrusion

Double Die Lamination Machine

The double die lamination machine manufactured by us is famous in the market for the unparalleled quality of the lamination. They are made to execute the two different processes one is melting the die and other is cooling it on the substance to develop a permanent layer on the object that is to be coated. The [double die lamination machine](#) has the capacity to deal with two dies at the same time and perform the process effectively.

Experienced In Extrusion

BOPP Rice Bag Lamination Machine

The BOPP rice bag lamination machine is used in the rice processing industries where they need to pack the rice in bags. These machines are made to develop a uniform layer on the rice bag that is fabricated from various materials. The BOPP rice bag lamination machine coats the bags on both the side with uniform layer of the substance and increasing the durability, quality and moisture resistant capacity of the bags.
